

Manage Who Can Access Your Data Online.

You desire to have a solution to securely access your business data, whether in or out of the office. The ideal solution usually involves a secure connection and a Remote Desktop Server for a large enterprise but this isn't always cost effective for small enterprise organisations.

Public cloud storage solutions have become increasingly convenient as they enable anywhere access to files and folders for web browsers, desktops and mobile devices, with sync and share capabilities. And we have seen companies like Dropbox and Box leading the charge to popularize these public cloud access methods.

The resulting challenge for large and small enterprises is to provide convenient access methods for corporate data while maintaining full control over the security of all data storage and data passage.

Securely Access Your Data From Today!

 **MATS Cloud** is our solution to provide you with a privately deployed storage and secure access infrastructure with all the public cloud features while retaining full control of the security for your data.

Use the available storage for Online Backup of files. You can right click on a folder and select "Attach to MATS Cloud". This is a very simple method to backup local folders to online storage services.

After the folder is attached to MATS Cloud the contents of the folder will be copied to cloud storage as a background task.

 **MATS Cloud** a secure access solution that supports you:

- ✓ Backup local content to online storage
- ✓ Access online storage with any device
- ✓ Share and Synchronize content
- ✓ Identity Integration
- ✓ Collaborate securely
